

This is my Haskell calculator

- Install the zip folder

- Open the terminal and open: `cd calcap`

- Then write in the terminal the command: `stack exece calcap`

- For the main page open <http://localhost:3000/> where it says: welcome to my Haskell calculator!

To do calculating tasks

`http://localhost:3000/add/#int/#int` for example `http://localhost:3000/add#3/#3`

`http://localhost:3000/sub/#int/#int` for example `http://localhost:3000/sub#3/#3`

`http://localhost:3000/mul/#int/#int` for example `http://localhost:3000/mul#3/#3`

`http://localhost:3000/div/#int/#int` for example `http://localhost:3000/div#3/#3`
